

science & faith *in harmony*

FREE EVENT
Thursday Sept 14 @ 7:30 PM

Featuring
Errol Lee

Presented by
VORTEX

Explorations in Science, Medicine, and Faith

Physics
 $\chi = \frac{3\Phi\mu\pi}{a(\epsilon - 6\omega)}$
Astronomy
random?
 $2\psi\theta = \omega\epsilon - 7\xi$
Biochemistry
love?
Genetics

Origin of the Universe
Peter Koropatwa
B.Sc. M.A.

Origin of Life
Michael Pare
B.Sc. M.Sc. M.D.

Origin of Species
Bob Giza
B.Sc. B.Ed.

Origin of Science
Tony Costa
B.A. M.A. Ph.D. (cand)

• **Fairview Library Theatre : 35 Fairview Mall Drive, North York**

THUR SEPT 14, 7:30-9:30pm – FREE SEMINAR

Dramatic Breakthroughs in Science
which is Reshaping Fundamental Thinking about
Evolution and Intelligent Design

The Origin of the Universe Peter Koropatwa M.A., B.Sc.

Is the universe a timeless ocean of space? A big blossom? A massive recycling project? How has the scientific thinking about the origin of the universe evolved? In this lecture, you'll discover the vital significance of your view of the universe's birth.

The Origin of Life Michael Pare, M.D., M.Sc., B.Sc.

Since Darwin and for the longest time, it was assumed that life evolved from simple cells over a long time to more complex forms like animals and humans. Recent research suggests a dramatically different story for the origin of life. This lecture reviews a fascinating "goo-to-the-zoo-to-you" story and shows how the laws of chemistry makes it unlikely that non-living chemicals arranged themselves into living cells and higher forms in a gradual, self-propelled evolution.

The Origin of Species: Evolution or Design? Bob Giza, B.Sc. Bed

In the last 50 years, breakthrough advances in molecular biology & cellular structure have cast doubt on the Darwinian theory of evolution. Looking at DNA, mutations, and irreducibly complex organelles, the question is asked again, "Did species evolve or was there intelligent design?"

The Origin and Nature of Science Tony Costa, B.A., M.A., Ph.D. (cand)

It was common for scientists to prefer to think there was no Creator or God since the proof was not apparent. How has scientific thinking changed on the nature and philosophy of science? Do scientists also depend on faith? Is faith and science incompatible or are they complimentary to each other? This lecture will take you through the history and philosophy of science and investigate its relationship to the realm of faith.

Surprise Appearance – Errol Lee

A gifted musician and professional entertainer, Errol has ignited a passionate mission in **character development** with thousands of youth across Ontario schools and overseas. A powerful motivational speaker, Errol is also an active associate of the Character Community Council of York Region. Errol captivates and enriches those fortunate enough to experience his passion.
